

Simple code to use for taking square of any number

```
In [2]: square_me <- function (x) {  
        y <- x^2  
        print(paste("The square of ", x,"is", y))  
      }  
      square_me(5)
```

```
[1] "The square of 5 is 25"
```

```
In [3]: square_me(25)
```

```
[1] "The square of 25 is 625"
```

```
In [4]: square_me(125)
```

```
[1] "The square of 125 is 15625"
```

```
In [5]: square_me(15625)
```

```
[1] "The square of 15625 is 244140625"
```

So just add whatever number you want to square in the round brackets and see the magic :)

```
In [ ]:
```
